

The California Deployment of Wireless Enhanced 9-1-1

Northern Region Presentation

Presenter: William Harry, ENP

California 9-1-1 Emergency Communications Office

Telecommunications Division, Department of General Services

April 24, 2006

Agenda

- Background
- Wireless E9-1-1 Technology
- Deployment Status
- PSAP Readiness/ GIS Funding
- Current Issues
- Project Information
- Q&A

Background

Wireless Statistics

- Cellular Subscribers grew from 16 million in 1994 to 207.9 million in 2006 (69%).
- 6% of US households are “wireless only.”
- In CA in 2005, of the 20 million 9-1-1 calls, more than half were wireless.

Background

FCC Order & CA Statutes

■ FCC Order 94-102

- Wireless Service Providers (WSPs) must be ready to deliver:
 - » Phase I - Callback Number, Cell Site & Sector
 - » Phase II - Latitude and longitude coordinates.
- Timelines vary by WSP, but all must be fully Phase II compliant by end of 2005.
- <http://www.fcc.gov/911/enhanced/>

■ CPUC Section 2892

Background

CA W E9-1-1 Stakeholders

- 475 Local Wire-line PSAPS “Enhanced 9-1-1”
- 24 CHP Centers
 - No ANI/ALI (7-digit PSTN with “Caller ID”)
- 15 Wireless Carriers (6 Major)
- 2 Data Base Providers – Intrado, TCS
- 3 Landline E9-1-1 Providers – AT&T, Verizon, Frontier
- Wireless Regional Coordinators

Regional Coordinators' Duties

- Schedule routing meetings.
- Keep PSAPs informed of the schedule.
- Schedule network and drive testing with the WSPs.
- Liason with the WSPs, State 9-1-1 office, the LECs, Database providers and the PSAPs.

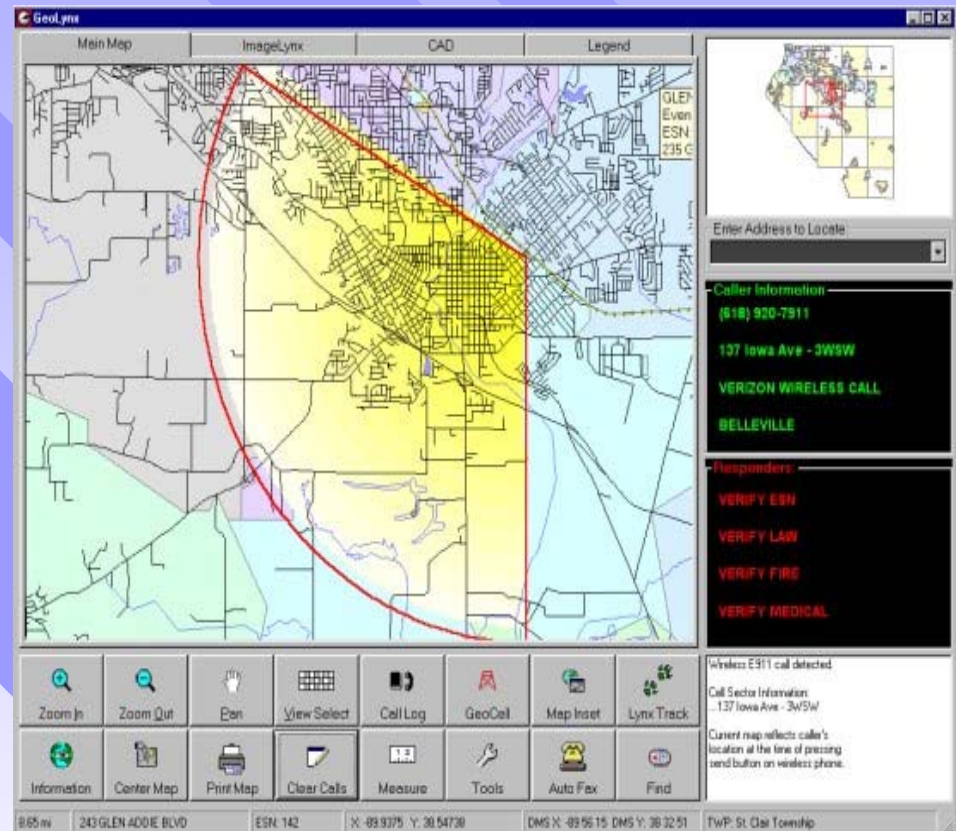

What Is “Wireless E9-1-1”?

- Wire-line E9-1-1
 - ANI + ALI + Selective Routing
 - Other Features - teltales, selective transfer, et.al.
- Wireless Phase I
 - Callback Phone Number (ANI) + Cell Sector (with routing based on cell sector) and other stuff.
- Wireless Phase II
 - Adds Precise Location Information (in form of X/Y coordinate) and sometimes uncertainty and confidence.

Wireless Phase I Call Information

- **The Phase I lat/long coordinates display the cell site location.**
- The caller's location is probably within a cell sector of that site.
- Cell site in urban areas have a range of about one mile although they can extend significantly farther.

Phase II Wireless Technologies

TRACKING DOWN THAT CALL

Facing a federal requirement to provide location data to 911 dispatch centers by 2005, cellphone carriers have developed two different systems to track wireless calls.

GPS-based system

- 1 The caller dials 911.
- 2 The wireless network tells the phone where to look for GPS satellites.
- 3 A special chip in the phone times the signals from three satellites to calculate its position, which is relayed to the nearest 911 center.

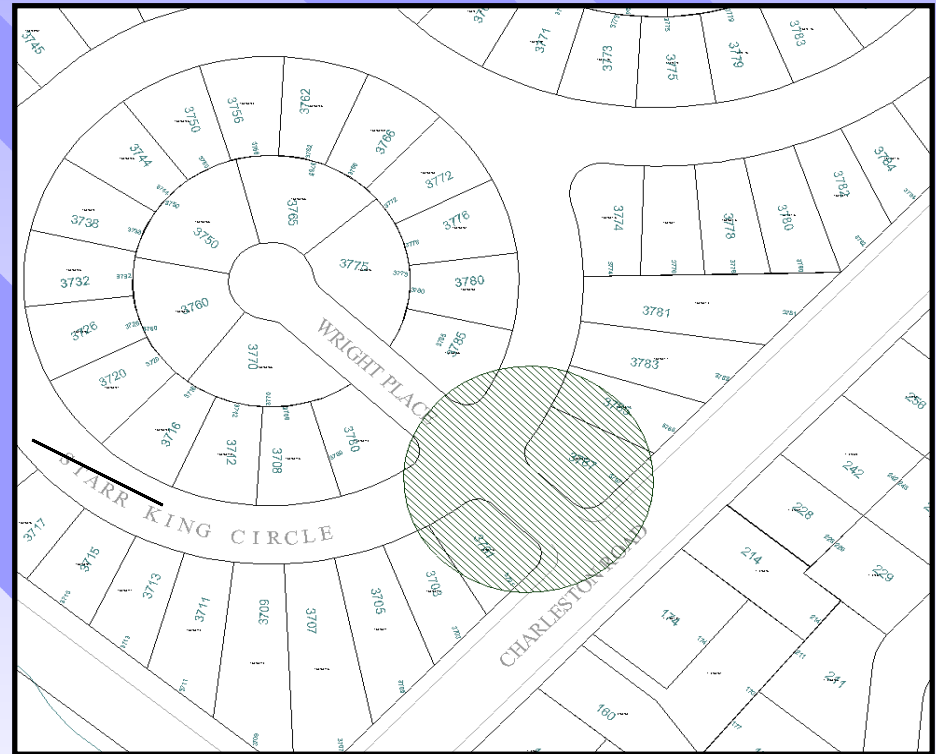

Network-based system

- 1 The caller dials 911.
- 2 The network's software monitors the signal at three towers near the phone.
- 3 Comparing the arrival time of the signal at different towers reveals the phone's location, which is relayed to the nearest 911 center.

Wireless Phase II Call Information

- The Phase II lat/long coordinates display the more accurate location of the caller.
- The caller's actual location will be within a radius in meters from the lat/long.
- That radius is indicated in the uncertainty field

Wireless E9-1-1 Statewide Plan Map

Map Depicts:

- 58 Counties
- 24 CHP Communications Centers (?)
- 7 Defined Wireless E9-1-1 Regions

Rollout Determined By:

- CHP Comm. Center Call Volumes
- Population Densities
- Network Readiness
- PSAP Readiness
- Market Penetration of Handsets

Implementation Notes:

- San Francisco CECC started Phase I in January 2002
- Los Angeles Proof of Concept Testing occurred April-August 2002
- All implementations planned for Phase I and II together
- Date indicates start of deployment

Los Angeles Region

Started 1st Quarter 2003

San Francisco Bay Area Region

Started 3rd Quarter 2003

San Diego Region

Started 2nd Quarter 2004

Sacramento Region

Started 4th Quarter in 2004

Southland Region

Started 1st Quarter 2005

Central Region

Projected to Start 1st Quarter 2006

Northern Region

Projected to Start in 2006

PSAP Readiness

- CPE - Phase II Compatibility
 - Accommodate W-ALI Display (Format 03 or 04)
 - 10/20 Digit Capable
 - Ability to Re-Bid ALI for Phase II & Location Updates
- CAD Interface
 - Will CAD accommodate new W-ALI Format?
 - Fallback is to receive Phase I only.
 - Can be funded out of GIS allotment.
- GIS
 - Not required to be considered ready.
 - PSAP must submit GIS Plan to obtain funding.

GIS Funding

Geographical Information Systems

- Usually a 3-Step Process for PSAPs.
- Step 1 – Receive letter of funding eligibility
- Step 2 – Submit GIS spending plan to State
 - Scope, resources, timelines, and itemized costs
 - State Office is developing GIS plan template.
- Step 3 – Document expenditures against plan

(GIS should differentiate between Phase I & II.)

Current Issues

- New State Call Routing Law (1/06)
- Participation of Local Agencies
- PSAP E9-1-1 Upgrades
- ILEC/WSP 9-1-1 Network Design
- Deployment Scheduling

Wireless E9-1-1 Benefits

- Better information (ANI w Mapped ALI) means faster call processing/dispatching.
- Shares load amongst all 500 PSAPS in state.
- X,Y coordinates allow for GIS (Geographical Information System) map displays at PSAPs.
- Perhaps Phase II Routing - Delivery of wireless calls to correct PSAP based on precise location.

State of California Wireless E9-1-1 Project

Wireless E9-1-1 Project Description

In accordance with Federal Communications Commission (FCC) Order 94-102, the California 9-1-1 Emergency Communications Office (State 9-1-1 Office) has launched a project to implement enhanced 9-1-1 services (Wireless E9-1-1) for wireless telephone users throughout California. Project objectives include preparing all California public safety answer points (PSAPs) to accommodate the information to be delivered by wireless carriers under Phase I and Phase II of the Order. Phase I specifies that the telephone number and receiving cell site or sector of the 9-1-1 caller be delivered to the PSAP. Phase II adds a more precise location, (usually with 50-100 meter accuracy or better) in the form of latitude/longitude coordinates, to the Phase I information.

A major emphasis of the wireless project is the redistribution of statewide wireless 9-1-1 call volumes to local PSAPs. Currently a limited number of California Highway Patrol (CHP) communication centers handle the overwhelming majority of wireless 9-1-1 calls. To accommodate these routing changes, new legislation was passed in 2000 (Assembly Bill 1263) and signed into law by Governor Gray Davis, effective January 1, 2001. This will allow approximately 500 local PSAPs to assist the 24 CHP communication centers in handling the estimated 7 million wireless 9-1-1 calls made in California each year.
